FOLIARTAL L-24
Calcium and Boron corrector - Special Post-harvest

GUARANTEED CONCENTRATIONS
- Calcium (CaO) 18.20% w/w = 24.75% w/v
- Boron (B) 0.14% w/w = 0.19% w/v

PROPERTIES AND APPLICATIONS
FOLIARTAL L-24 is a liquid foliar fertilizer that is quickly absorbed and assimilated by the crop, rich in Calcium and with Boron, specially developed as a source of these elements. Its application promotes the quality of the fruits and prevents nutritional imbalances due to calcium deficiency.

FOLIARTAL L-24 is recommended as a complementary source of Calcium and Boron for crops which need large inputs of these nutrients. It avoids BITTER PIT in apple trees, fruit cracking and blossom end rot in horticultural crops.

CROPS
FOLIARTAL L-24 is recommended for all kinds of crops: Fruit trees (pip and pit fruits), citrus, horticultural, cereals and ornamental crops.

APPLICATION AND DOSAGE
Because of its totally assimilable formula, FOLIARTAL L-24 can be applied by foliar feeding using any kind of irrigation system. Avoid its use during high insolation hours. General application dosages: Foliar: 250-500cc/100 liters of water.

INCOMPATIBILITIES
FOLIARTAL L-24 is compatible with most of the available fertilizers and phytosanitary products, even though it is advisable to perform a previous test. Do not mix with mineral oils and alkaline reaction products.
